

Sustainability & Climate Change

What We Do

Statistics show that the recent and projected growth in global emissions, mitigation, and adaptation strategies by all major economies will require a strong commitment from all stakeholders to achieve Sustainable Development Goals (SDGs).

With Environmental, Social & Governance (ESG) issues becoming increasingly relevant in investment practices, stakeholders are under pressure to demonstrate and integrate SDGs in their business operations.

ESC work with organisations that need to embed ESG into their strategy to build a resilient business set to thrive in the new reality and to play their part in making the world a more sustainable and better place for everyone.

With our keen insights into carbon management and energy strategy we help you to integrate sustainability into your core business decision-making processes and culture.

Our Approach

ESC works with our clients to integrate sustainability for their core business decision making processes and culture by leveraging on our international team's deep experience and keen insights in carbon management and energy strategy.

We ensure successful Environmental, Social, and Governance (ESG) strategy by focusing on identifying and prioritizing specific sustainability opportunities across the value-chain to achieve three-fold benefits of meeting consumer, regulatory expectations, and improving the bottom line.

Technological change holds the key to both the mitigation costs of reducing greenhouse gas emissions and the adaptation costs of adjusting to climate change.

Our carbon consulting practice offers unique capabilities through our expertise, excellence and experience in the application of proven carbon management solutions using a variety of technologies.

Our Technical Capabilities

- Carbon management
- Decarbonization
- Carbon footprint reduction (product carbon footprint and corporate carbon footprint)
- Energy efficiency and emissions reduction
- Strategy development
- Sustainability reporting and strategy
- Climate change adaptation & risks mitigation
