

EHS & Risk Management

What We Do

With the continued evolution of environment, health & safety (EHS) laws, regulations, standards, and social expectations, many organisations strive to meet their EHS compliance and risk requirements carefully and efficiently.

ESC delivers flexible and purpose fit environment, health & safety, and risk management solutions to multisector clients in Asia and integrates them strategically with their day-to-day business and operations.

From government environmental policy development and enterprise-wide assessments to facility-level EHS resourcing initiatives and support, our experts provide our clients with value-added reports to mitigate and reduce EHS risks. We then proactively establish programs to manage the remaining EHS responsibilities to meet client objectives.

Our Approach

ESC provides strategic information and guidance on current and emerging EHS laws, regulations and standards for all aspects of risk and compliance using an integrated approach.

Our services are focused on helping our clients achieve best practices in EHS & risk management whilst minimising their exposure to risks and uncertainties. Whether providing strategic advice, identifying and managing EHS risks, permitting requirements, or developing training plans, ESC has the resources and skills necessary to meet client objectives for their internal and external reporting requirements.

Leveraging on the expertise of our experienced and multilingual consultants, we are in a unique position to ensure your company continues to lead in the field of EHS and keep ahead of regulatory policies and issues. Your EHS excellence will build value and enhance your corporate image.
